switchover

DIGITAL SWITCHOVER

Confused:

Starting in 2008 and ending in 2012, TV services in the UK will go completely digital, TV region by TV region. This process is called [digital switchover](#). The UK's old television broadcast signal (known as "analogue") is being switched off and replaced with a "digital" signal. Any TV set that's not converted to digital when the switchover takes place will no longer receive TV programmes.

Getting Digital TV

In order to decide how you want to receive digital TV, there are a number of things that you will need to consider. Have a look at the handy illustration and checklist below.

1. If you have poor or snowy TV reception now you may need to consider replacing your existing aerial.
2. Some properties may require planning permission for digital equipment.
3. Trees and hills can affect the quality of the signal. If you receive a good analogue signal now the aerial should be OK.
4. If you have a set top aerial and get a good picture now it should be fine after switchover.
5. If you want to record one channel while watching another you'll need to get a digital TV recorder.
6. Your radio will be unaffected by the switchover. You'll need to convert all the TVs that you watch TV programmes on.

Assistance when you need it.

Technical support is provided to see what's happening on your remote desktop and provide immediate help.

You can request support directly from our Web site through skype or on the phone, and we can create a immediate remote support session as needed.

This feature works particularly well if you are already on the phone with us and need assistance NOW.

Trust DIGI-COMP for reliable and secure support sessions.

Your support sessions will take place with the reliability, security, and availability you expect and deserve from a trustworthy Internet information-sharing company. All communication is secure and private. The strong, 128-bit encryption provides reliable security for your sessions data.
